Industrial Cellular Router  
5 x Eth + 2 x SIM

## INTRODUCTION

The Robustel R2011 Industrial Cellular Router is a rugged, versatile 4G router with 5 Ethernet ports, dual SIM single standby capability and a range of advanced functions for mission critical IoT or M2M applications.

The R2011 runs on Robustel's own Linux based Operating System, RobustOS. Developed entirely in-house, this gives way to a very high standard of technical support and high reliability. Robustel offers a **Software Development Kit (SDK)** to allow additional customization by using C, C++. It also provides rich **Apps** to meet fragmented IoT market demands such as:

**RobustVPN** - Highly flexible hosted VPN service so customers can easily enjoy a "fixed IP router"

**Data-Guard** - Invaluable failsafe in case of a system failure and runaway data usage

**Smart Reboot** - SMS tool to push roaming SIMs from a non-working to working state

**Smart Roaming** - Provides you with device-assisted intelligent network selection for roaming SIMs to improve performance and reduce risk.

**RCMS** is Robustel's free router monitoring service that is fully compatible with the R2011. It allows customer to see a location overview of their routers quickly and simply on a map. Features such as data usage, signal strength, current network and much more can then be viewed on a per router basis. Over-the-air updates are supported for Firmware, router configuration and Apps serving as essential 'insurance' if anything was not quite right during deployment.
